Scalepoint is looking for a Junior Data Analyst

Aiming for new heights

At Scalepoint, we aim for the stars. Our ambition is clear: we want to conquer the world. We successfully help insurers help their customers. We support 26 insurers in five countries around Europe

We are now looking for a Junior Data Analyst, whose main task will be to support the Business Intelligence department in Product. You will be part of a small dedicated team which drives projects related to analytics, reporting and data. You will handle execution of monthly reporting, analyzing data from our products to help not only ourselves, but also our customers get perspective on the data and you will participate in the various projects we have in the department.

What kind of geek are you?

At Scalepoint, you will meet other geeks. They love to go to work – just like you. We'll be looking forward to working with you if you are a world champion when it comes to:

Data

We use the data from our products to build dashboards and reports or conduct analysis that can enable data-driven decisions. You are also interested in learning to code with DAX, M or VBA, which are all part of our current reporting solutions.

Visualizing

To really bring value to the end-consumer of our data, it's required that we present it in a way that's intuitive and understandable. You strive to create the perfect product, whether it is dashboard in PowerBI or a report in Excel.

Knowledge-hungry

You want to learn new things and you adapt quickly. You enjoy taking full responsibility of your tasks and are not afraid to ask questions or dive into uncharted territories.

What to dive into

At Scalepoint, there's always room for developing and exploring great ideas. We know it takes high ambitions to conquer the world.

You are ambitious and have a head full of good ideas. Helping the team, you will dive into the following tasks:

Monthly Reporting

Every month we execute monthly reporting to customers and internal stakeholders. You will have a primary role in execution, maintenance and optimization.

Dashboards

We maintain and develop dashboards in Power Bi towards customers and internal stakeholders. There is a constant need to develop existing or new dashboards while also optimizing governance surrounding Power BI.

Supporting the team in various projects

The team consistently supports the rest of the organization with projects that needs some number crunching, data extracting or visualizing. Therefore there will be various tasks where our main purpose is to understand the need and help the business forward.

Scalepoint spirit in everyday life

Come as you are. That's how we prefer it. You can easily leave dress codes, permanent lunch buddies, and corporate business attitudes at home. Our office is filled with hugs and high fives – and we believe that everyone is doing their best.

We have employees from 11 nationalities, spread across our offices in Copenhagen, Poland and Switzerland. 63% of us ride a bicycle to work. 42% eat vegetarian lunch. 38% are parents. And 52% do not work out on a regular basis. Our unofficial and self-declared Minister of Sports tries to create a movement by introducing soccer and running club. However, that might not change the fact that we have a very generous attitude to sweets and cake. But that's ok because we do have a lot to celebrate at Scalepoint.

Would you like to join the journey?

You must be able to write and speak English fluently. It is an advantage if you have experience with Excel, Power BI or SQL, but it is not a pre-requisite. We expect you to be studying within relevant fields such as Business Administration, Finance, IT etc. We want to stress that your engagement and commitment is what matters most.

Are you ready to jump on our ride? Submit your application and CV to job@scalepoint.com. We will review the applications and conduct interviews continuously.
